This includes not only your skill set, but understanding what's important to you to help determine what you really want. We work for you – your satisfaction is our success.

JOB ID #: C10271

JOB TITLE: Group Lead, Facilities Engineering

POSITION LOCATION: Calgary, AB

OPERATING AREA: Fort Nelson, NE BC

Our Client:

Our client is a Canadian headquartered natural gas producer with resource plays in Canada and the United States. The organization is focused on delivering steady, reliable gas production over the long term to generate company value.

The company has an excellent opportunity for an individual with exceptional leadership and technical skills to assume the role of Group Lead of Facilities Engineering. As a key member of the Operations and Facilities Leadership Team, you will be responsible to coordinate and lead the scoping, design, and project management of pipelines, compressor stations, wellsites and other facilities within the business unit. The engineering group also provides ongoing support to our operating properties as well as executes related production optimization work. You will lead a team of engineers, project managers and support staff, while working closely with other business unit members.

Reports to: Team Lead, Facilities & Operations

Responsibilities/Accountabilities:

- Steward towards disciplined project execution within a stage gate framework.
- Lead a facility engineering staff (approx. 7 people) in planning and executing area facility projects that integrate with the business unit's development strategy.

- Identify long term strategic infrastructure needs for the business unit, taking into consideration cost, implementation, and multi-year development cycles.
- Ensure all activities align with safety, environment and regulatory compliance and help lead safety improvements within the field construction activity.
- Ensure schedules are met or improved upon with through planning and execution.
- Create valuable tracking mechanisms to establish cost trends, performance measures, and efficiency variations.
- Provide technical support to operations in optimizing production.
- Ensure alignment of goals between field operations, construction, and engineering.
- Research and implement new ideas and concepts with respect to facility, pipeline, and construction practices in order to reduce costs and improve efficiency for fast paced resource development.

Skills/Qualifications:

- APEGGA Professional Engineer with 15 years of engineering experience
- Strong experience base in project and construction management.
- Demonstrated leadership experience and ability to mentor junior staff
- Demonstrated ability to manage projects, run project economics, and track performance.
- Experience with production operations, completions, and well optimization an asset.
- Entrepreneurial attitude combined with exceptional technical, analytical, and problem-solving skills.
- Ability to maintain a good working relationship with other technical team members.
- Strong communication, teamwork and interpersonal skills.

Compensation/Remuneration:

Compensation includes competitive base salary, performance bonus, long term incentives, savings plan, company pension, flexible benefits program and coverage, and excellent vacation and flex/work schedule.
